PROMPT-:

Please build a complete Tic-Tac-Toe web game written entirely in Python, contained in a single file called tictactoe.py.

I want to be able to just type "python tictactoe.py" in my terminal, and have it automatically opened the game in my web browser to play right away. I do not want to install any extra packages (no pip install) or manage separate HTML, CSS, or image files—everything should work directly from that one Python file.

Here is what the game should include:

1. Game Modes & Difficulties:

- 2-Player mode where two people take turns on the same computer.

- Single-player mode against the computer with 3 difficulty options:

• Easy: Computer picks random squares.

• Medium: Computer tries to win and blocks me if I am about to win.

• Hard: Impossible to beat—the computer should play perfectly and never lose.

- Add a slight delay (about half a second) before the computer makes its move so it feels natural, like it's thinking.

- Alternate who goes first each round so both players get a fair turn starting.

2. Look & Feel:

- A clean, modern dark-themed look with glowing blue for X and red/pink for O.

- Clear turn indicator at the top showing whose turn it is, plus a move counter.

- When someone gets 3-in-a-row, highlight the winning line and celebrate with a victory popup and confetti.

- Subtle built-in sound effects when clicking cells, winning, or getting a draw, plus a button to mute/unmute sound.

3. Scoreboard & Controls:

- A scoreboard showing wins for Player X, Player O (or Computer), and draws that automatically saves so scores aren't lost when I refresh or restart the game.

- Buttons for "New Game", "Reset Scores", and "Undo".

- When I click "Undo" against the computer, it should undo both the computer's move and my move, so it goes back to my turn.

- Keyboard shortcuts: Pressing numbers 1 to 9 on the keyboard to pick a cell, N for a new game, U to undo, and R to reset scores.
